

# Cyclops DLC Copying

Updated Mar 2023

This is an alternate method to load DLCs onto your iPad. The general steps are:

1. TTF delivers the new DLC file(s) to you via Media Shuttle or Aspera
2. Download the DLC to your computer
3. Copy the DLC to a USB stick/drive
4. Use the iOS Files app to move the DLC from the USB drive into the Cyclops app
5. Mount the DLC in Cyclops

## Download the DLC to your computer

We'll set up an Aspera account to use to deliver the DLCs to you. We use Aspera for most all our client deliveries so it's very likely that we've already set it up. Download the DLC from Aspera to your computer.

## Copy the DLC to a USB stick/drive

The iPad Pro has a USB-C port which makes it fairly easy to connect a USB-C equipped USB thumb drive or ext HD to it. Copy the DLC from your computer to the USB drive and then plug the USB drive into your iPad. This method would be more difficult if you are using an iPhone or an older iPad without USB-C.

Alternatively, you could copy the DLC to a cloud storage like Google Drive or Box and then download it directly to your device from there.

If you are using a Mac you can use AirDrop to transfer the DLC from your Mac computer to your iPad. When receiving the files via AirDrop use the Files app and save them to **On My iPad > Cyclops 3.3 > TTF > PersistentDownloadDir**

Then skip to the *Mount the DLC in Cyclops* instructions below

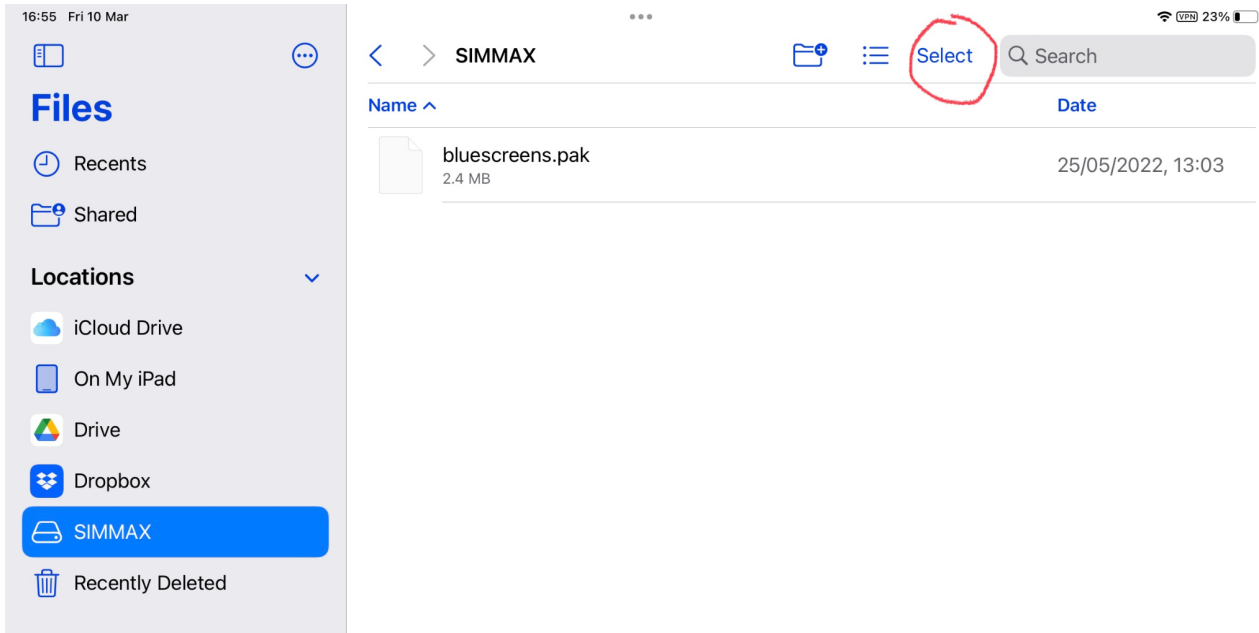

## Copy the DLC to the Cyclops App

*Note: You need to make sure to run the Cyclops app at least once before attempting to copy files to it.*

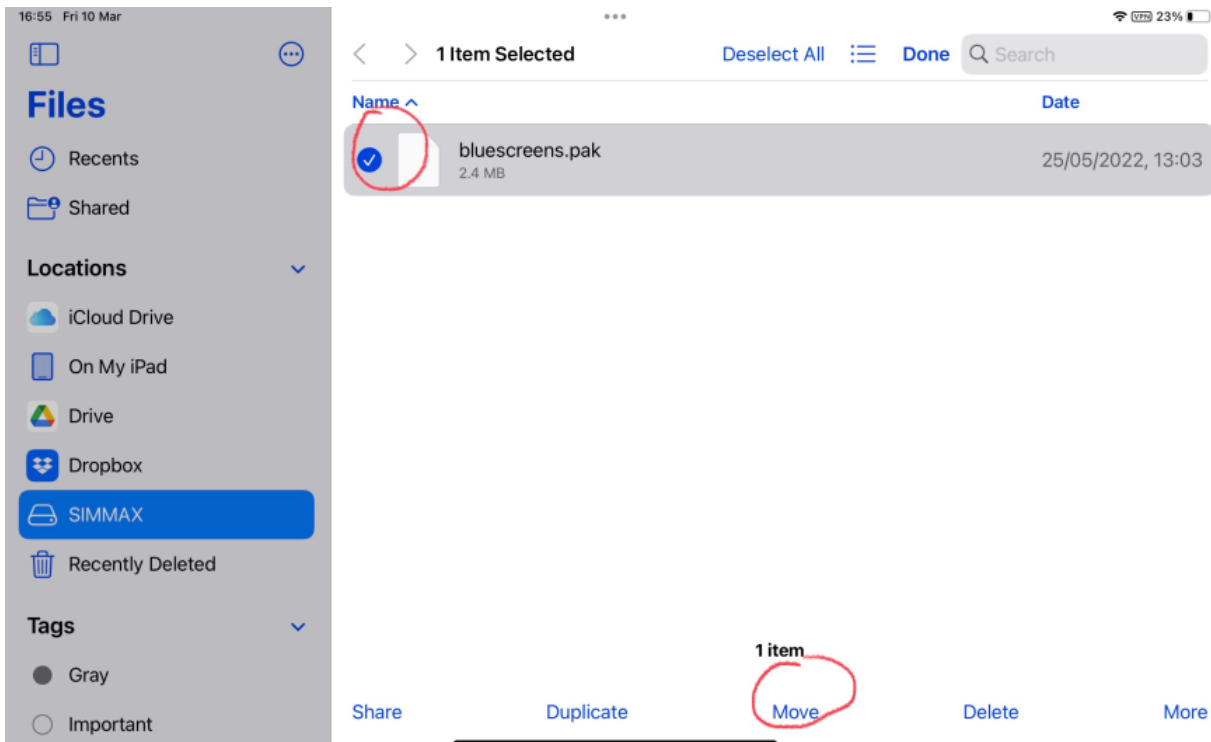

Next, you need to move the DLC from the USB stick/drive to a special folder in the Cyclops App. First, find the Files app on your iPad. This is a default app in iOS so you should already have it installed,

In the Files app use the left navigation and select your USB drive. In this example mine is named "SIMMAX" You should see all the files that are on the USB drive. Now, use the "Select" link in the upper right side of the screen.

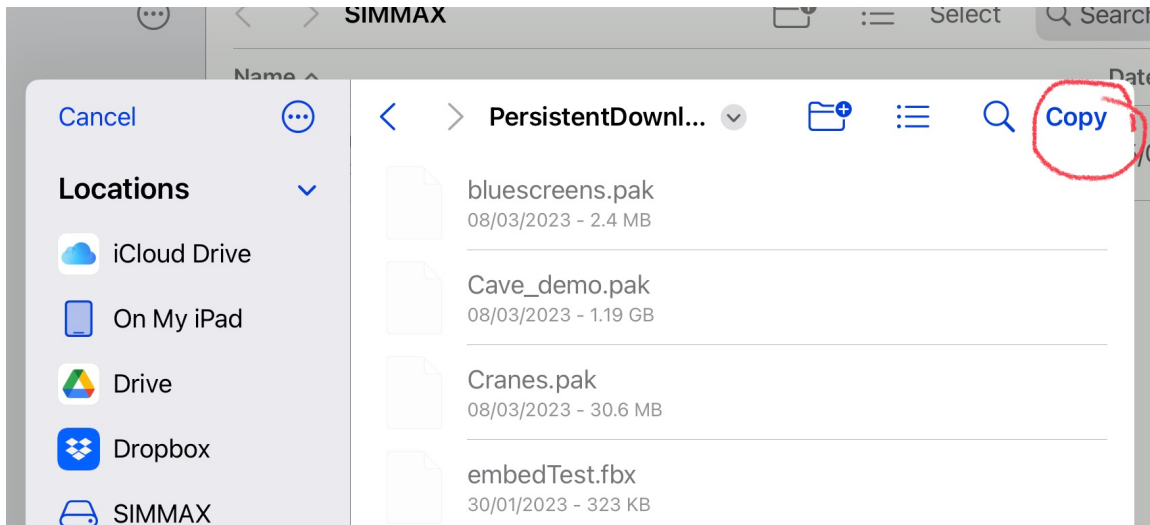

Now select the file or files you want to move to the Cyclops app. If you have multiple files you can select all of them and copy all of them together. Select all the files you want and then tap the "Move" link at the bottom of the screen.

Now you need to tell the Files app where you want to move your file(s) to. You want to navigate to **On My iPad > Cyclops 3.3 > TTF > PersistentDownloadDir**

Then tap the “Copy” link in the upper right.

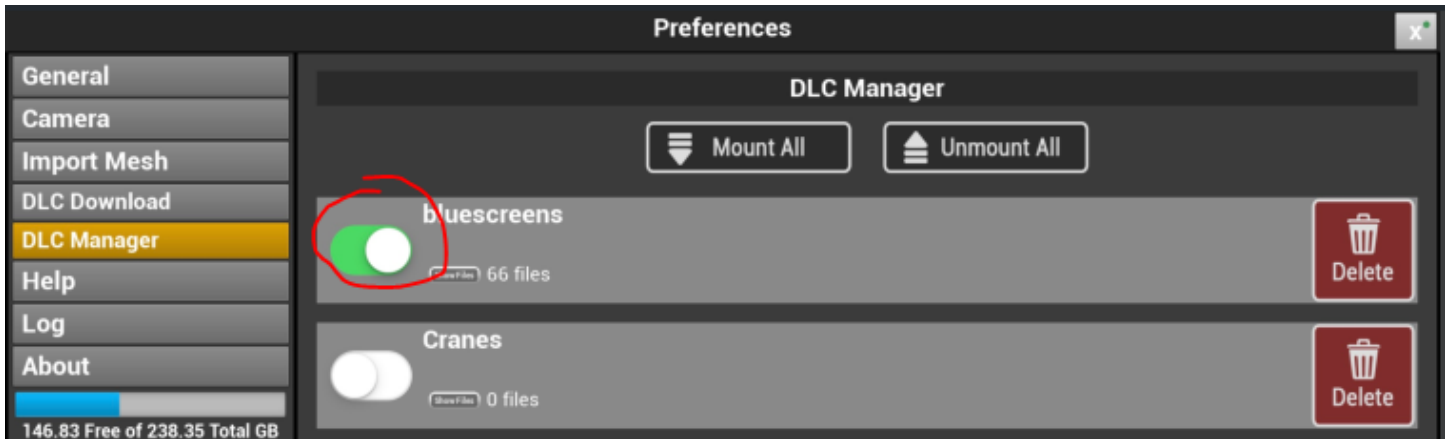

The file(s) should now get copied to the Cyclops app folder.

*Note: If you do not see “On My iPad” or “Cyclops” in the Files App. You may need to restart your iPad.*

# Mount the DLCs in Cyclops

Launch your Cyclops app and go into **Preferences > DLC Manager**. Find the DLC that you've copied to Cyclops and tap the toggle on the left to mount that DLC.

*Note: If you don't see the DLC listed you may need to restart Cyclops.*

Now those shots and models will be available in the menus in Cyclops.
